

# COVID-19 IN PEOPLE WITH CF IN EUROPE

Data up to 16 June 2020

## Background

CF patient registries throughout Europe are collecting data about people with CF who become infected with SARS-Cov-2, causing the illness COVID-19.

Countries that contribute annual data to the ECFS Patient Registry (ECFSPR) were invited to report COVID-19 case data of people with a confirmed diagnosis of CF. Here we present a weekly update of centralised, anonymised data.

The data is preliminary, incomplete, might change over time, and the number of cases is low. Therefore this information should not be used to direct clinical decisions.

## Covid-19/CF cases

14 countries with cases

90 cases reported

81 cases documented

## Status of COVID-19 illness

3 died

11 ongoing

56 recovered

11 unknown

## Gender

39 male

42 female

## Age

20 <18 years

40 18-49 years

4 >50 years

## Severity

32 mild cases

7 severe cases

3 critical cases

## Further information

- 42 patients were hospitalised (6 in the ICU) and 2 patients needed ventilation
- 18 patients were asymptomatic.
- The top 5 symptoms were fever, increased cough, fatigue, increased sputum production and headache.

Note: sometimes data are missing for measurements, therefore the numbers do not always add up as expected
