

COVID-19 IN PEOPLE WITH CF IN EUROPE

Data up to 8 March 21

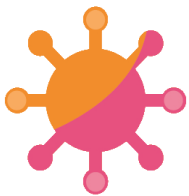

Background

CF patient registries throughout Europe are collecting data about people with CF who become infected with SARS-Cov-2, causing the illness COVID-19.

Countries that contribute annual data to the ECFS Patient Registry (ECFSPR) were invited to report COVID-19 case data of people with a confirmed diagnosis of CF. Here we present a weekly update of centralised, anonymised data.

The data is preliminary, incomplete, might change over time, and the number of cases is low. Therefore this information should not be used to direct clinical decisions.

Covid-19/CF cases

27 countries with cases
1126 cases reported
889 cases documented

Status of COVID-19 illness

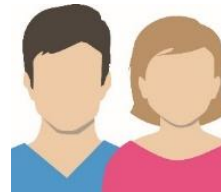

13 died
38 ongoing
816 recovered
19 unknown

Gender

429 Male
457 Female

Age

276 <18 years
570 18-49 years
40 >50 years

Severity

499 mild /asymptomatic
19 severe cases
7 critical cases
361 Severity unknown

Further information

- 206 patients were hospitalised (26 in the ICU) and 10 patients needed ventilation
- 211 patients were asymptomatic.
- The top 5 symptoms were fever, increased cough, muscle/joint pain, fatigue, increased dyspnoea.

Note: sometimes data are missing for measurements, therefore the numbers do not always add up as expected
